

Confirmed RVF outbreaks in South Africa

RVF in South Africa

- ▲ RVF: Laboratory results. Reports awaited
- ⬡ RVF: Laboratory results and Provincial report
- Main Towns

Acute disease occurred in cattle and sheep, with high mortalities reported in lambs. Disease investigations are ongoing and farmers are advised to vaccinate livestock.

The first outbreak was confirmed (RT-PCR) on 12 February 2010. Reports were sent to the OIE on 19/02/2010 and 3/03/2010

Please note: The location of the nearest town was used to indicate the location of the outbreaks without provincial reports and not the exact location of the farms.
